Re: *Weekly Update for Advanced Oxidation Water Treatment Plant*
WSB Project No. 2170-29

The AOP is now operational, and the UV equipment supplier and integrator are finalizing the controls and logic for the plant. The contractor is working on their “punch list” – the last items needed before final completion – including seeding, putting the final coat on the ground storage reservoir, and cleaning the water treatment facility. The contractor is preparing the site and the plant for the ribbon cutting ceremony on August 9.
