Re: 2017 Street and Utility Improvement Project  
Preconstruction Storm Sewer Survey  
City of St. Anthony Village, MN  
WSB Project No. 2170-340

Dear Resident/Owner:

On August 23, 2016, the St. Anthony Village City Council authorized the preparation of plans and specifications for street and utility improvements during the 2017 construction season. As such, the City's consultant engineering firm WSB & Associates, along with Visu Sewer, will be conducting field measurements and gathering information in your neighborhood. Visu Sewer is a company contracted through the City to perform televising operations of the existing sanitary sewer and services along with the existing storm sewer main.

The existing storm sewer main is located along the north side of the roadway outside of the paved road surface. On Monday, September 12, 2016, the St. Anthony Village Public Works Department will be excavating to expose the existing storm manhole castings to allow access to Visu Sewer to perform televising operations of the existing storm sewer main. In the next week, you may notice a Visu Sewer truck and staff in your front yard, adjacent to the road, to access the existing storm sewer main. Access to the storm sewer main will be limited within the City right-of-way. The City right-of-way is typically the area within 15 feet of the back of curb. This information will be used to assist with the design.

The City of St. Anthony Village would like to thank you in advance for your patience and cooperation with this process as we strive to improve and maintain our infrastructure. If you have any questions or concerns regarding this letter or the survey to be completed on your property, please feel free to contact me at 651-286-8465.

Sincerely,

**WSB & Associates, Inc.**
